Appendix B: Service Delivery Indicators

Amendments have been made to the figures reported under BVPI 149. The guidance and implementation of the reporting of this statistic now allows for the removal of all properties from 2005/06 onwards. This is to be considered especially in relation to yearly comparisons as previous years statistics contain domestic properties.

Please be aware that currently for 2006/07 there are 3 outstanding FDR1s (incident reports, since April 2006) that may affect the following data once complete. (0 of these are a domestic dwelling.)

Commentary

Although a cross is attributed against target, no action is currently required as the seasonal high has passed. Therefore it is likely that target will be achieved.

(*) Some fire and resource services have been reviewing the way in which non-fatal casualties are recorded. This could account for some of the changes in the injury rates in 2002/03.

(*) In 2004/05 Durham improved their recording procedures for injuries. Consequently, a larger proportion have been recorded

as 'precautionary checks' (and therefore been excluded from BVPI calculations) than in previous years. This accounts for some of the reduction in 2004/05.

(*) In 2004/05 Humberside improved their recording procedures for injuries. Consequently, a larger proportion have been recorded

as 'precautionary checks' (and therefore been excluded from BVPI calculations) than in previous years. This accounts for some of the reduction in 2004/05.

⁽⁹⁾ From 2001/02 a larger proportion of injuries in Kent have been recorded as 'precautionary checks' (and consequently been excluded

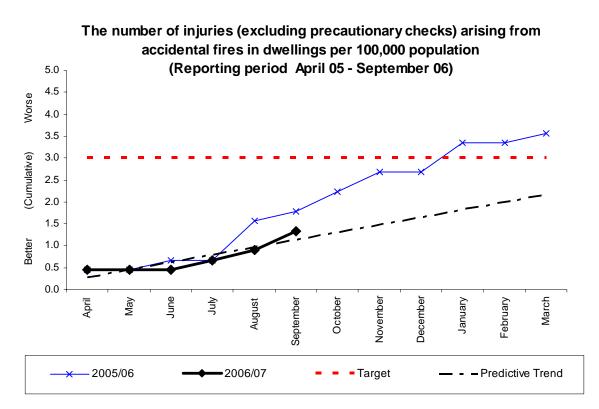

from BVPI calculations) than in previous years. This accounts in part for the change in the BVPI between 2000/01 and 2001/02.

Commentary

A process has been implemented where an incident commander attends all fires where this indicator is applicable. There is also a quality check performed on FDR1 reports, after which FDR2 change procedures are available and utilised.

Commentary

Although prediction is to fail target, it is probable that the target will actually be achieved due to seasonal variance. The peak period for the total number of malicious false alarms is in the summer months.

Commentary

As per BVPI146, the seasonal high for AFAs is the summer period, therefore prediction to fail target may be wrong. There is a new initiative on reduction, whilst an additional resource is currently available via a person on modified duties.

⁽³⁾ The data for 2003/04 and 2004/05 have been collected on an FRS17 basis. The main difference between these and previous years is that decisions relating to pensions are accounted for in the year they are taken, rather than in the year to which they apply. As a result, comparisons between 2003/04 and 2004/05 and earlier years may not be valid.

(*) Data for all years have been revised following the publication of revised mid-year population estimates by ONS in October 2004.

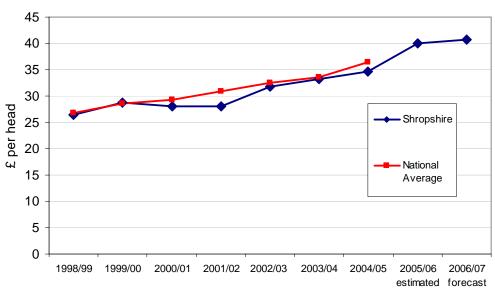

(*) 2003/04 was previously published as 53.2. It has been revised in the light of an amendment received from the Brigade.

This BVPI is produced yearly and is taken from the CIPFA statistics. 2005/06 data is not yet verified by the DCLG, and 2006/07 is an estimate based on the budget.

BVPI 150 concerns the expenditure per head of population on the provision of fire and rescue services. For information purposes, a graph of historic verified data is shown, with comparison made with the national average.

Commentary

There are 19 items which are point scored to give this percentage. Currently, this brigade is able to say yes to 17 of these. "Reducing number of complaints from service users of all ethnic groups and reducing any differences?" and "increasing satisfaction in the way racial incidents resulting in further action are handled" are the 2 outstanding items. The brigade has now started to monitor ethnicity of complainants.

There is likely to be a further 1 firefighter retiring due to ill-health occurring before the year end. This will still mean achieving target.

Commentary

The proposed cultural audit would enable us to measure this indicator more accurately as there has been no previous requirement to divulge disability. It would enable the identification of the number of staff classed as disabled.

RETAINED APPLIANCE AVAILABILITY 2006/07

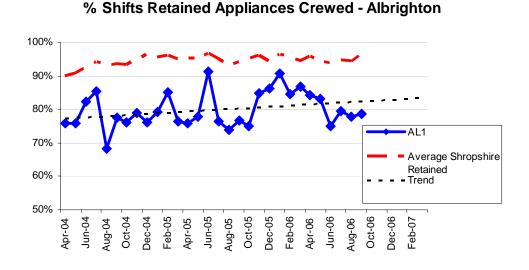

Commentary

The above graph show the whole retained picture, with the availability of all retained appliances being tracked alongside the percentage of times they would have been able to turn out, but with a deficient crew of below 4. The aim is to increase the availability to 100%, and reduce supernumery to 0%.
